## Services Catalogue

# teleSUR

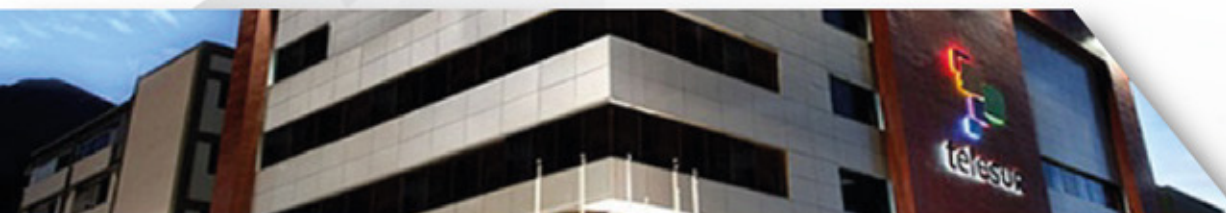

We are expanding our products and services at teleSUR without losing sight of our commitment to shed light on what's happening around the world.

This year we will be looking to take on new challenges, allowing our friends and allies to join us.

In doing this, we are making our TV studios, sets and state of the art technology available to produce your shows throughout Latin America.

Our new services will be available in Caracas, Mexico City and Quito.

Join us!

## Teleport

Our Teleport is comprised by two rooms, one downlink SD/HD/SDI and another uplink SD/HD/SDI.

- Uplink services through Venesat multichannel for live transmissions from site studios in SD or HD.
- Fly-Away for uplink services , two of them on Band C and another in KU band, with video capabilities in SD and HD.
- Transmission Port in a 7,6 meter antenna in KU band, for uplink services from one carrier and other satellites such as Venesat, IS-14, IS-11 and IS-1R.
- To uplink international satellites occasional frequencies are required.
- Professional technical staff with knowledge to guarantee a stable signal with the highest quality standards.
- Measurement tools for RF signals and audiovisual processing at Central Control (Colorimetry, Conversion, Scaling, Adequacy) to optimize results.
